PROJECTS

Serverless Order Processing System | AWS, Step Functions, Lambda, SQS, DynamoDB 2026
Designed and deployed a serverless, event-driven order processing system on AWS using Step Functions, Lambda, API Gateway, and SQS. Implemented idempotency using DynamoDB with TTL to prevent duplicate processing, integrated DLQ for failure isolation, configured CloudWatch for observability, and built real-time Slack alerts for execution failures. Applied retry and per-state error handling to ensure production-grade reliability.

High Availability Web Application | AWS, EC2, RDS, S3 2025
Created and deployed a three-tier AWS architecture using EC2, RDS, and S3 for scalable, fault-tolerant delivery. Implemented load balancing, auto scaling, and secure networking,strengthening expertise in reliable cloud solutions.

Dockerized Web App | Docker, Node.js, MongoDB, React 2025
Built and deployed a full-stack application with multi-service Docker containers, integrating Node.js, MongoDB, and frontend components. Engineered inter-container networking, image optimization, and streamlined workflows to ensure scalable, efficient development.

Job Portal | ReactJS, ExpressJS, NodeJS, MongoDB 2025
Developed a niche job portal for pet-related services and and elder care,focused on frontend features, backend integration, and database connectivity
